

Sampling

non-sampling error are larger

sampling error are larger

A. non-probability sampling methods

B. probability sampling methods

1. convenience sampling

1. SRS

2. judgemental sampling

2. systematic sampling

3. Quota sampling

3. stratified sampling

4. Snowball sampling

4. Cluster sampling

(A1)

Convenience Sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	9	14	19	24
5	10	15	20	25

$N = 25$

$n = 5$

most convenient

- + most convenient, least expensive and time consuming
- selection bias

(A2)

Judgemental sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	5	14	15	24
5	10	15	20	25

+ cost +
conv.
time

- subjective
bias

(A3)

Quota Sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	5	14	15	24
5	10	15	20	25

+ can
control
for certain
charachter.

- selection
bias

not representative

(A4)

Snowball sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	5	14	15	24
5	10	15	20	25

+ can estimate
rare
characteristics

- Time-
consuming

B1

Simple Random Sampling

↳

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	9	14	19	24
5	10	15	20	25

? representative
no selection
bias

- difficult
to choose
sampling frame
lower precision
no assurance of
representative

B2

Systematic Sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	9	14	19	24
5	10	15	20	25

$$N = 25$$

$$n = 5$$

$$i = 25/5$$

+ more representative

- possible
break of
representativeness
if observations
are cyclical

B3

Stratified Sampling

(A)	(B)	(C)	(D)	(E)
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	9	14	19	24
5	10	15	20	25

? need relevant
stratification
variable

+ precision

- expensive

(B4)

Cluster Sampling

A	B	C	D	E
1	6	11	16	21
2	7	12	17	22
3	8	13	18	23
4	5	14	15	24
5	10	15	20	25

+ easier
cost-effective

- imprecise

Stratified sampling

clusters are heterogeneous
obj in clusters are homogeneous

Cluster sampling

clusters are homogeneous
obj in clusters are heterogeneous

Post Sampling

undersampling

oversampling
